Project Idea:
We are going to make a program to facilitate the management of a mobile and Laptop service center where you can fix your devices, replace parts, sell old and new devices and buy some accessories to customize your phone furthermore the program also defines the type of errors the center can fix and assign each error to a certain worker.

Project Objective:

- Make the shop able to handle more customers.
- Make it easier to keep track of phones to be fixed.
- Estimate the cost and time of repair.
- facilitate the definition of the error between the different workers
